Heat capacities of molecular lattices. I. Introduction, R. C. Lord, Jr.—693; II. The structure of metallic lithium, R. C. Lord, Jr.—700
Influence of the temperature of crystallization on the melting of crystalline rubber, Norman Bekkedahl and Lawrence A. Wood—193(L)
Infra-red absorption and reflection spectra of KHF_2 and KDF_2, J. A. A. Ketelaar—775(L)
Magnetic susceptibility of Ti and Zr, C. F. Squire and A. R. Kaufmann—673
Magnetic and x-ray studies on Ti and Zr with dissolved hydrogen, J. Fitzwilliam, A. Kaufmann and C. Squire—678
Molar volume, refraction and interionic forces, Kasimir Fajans—282(L)
Note on Bethe-Kirkwood's partition function for a binary solid solution, T. S. Chang—169
Note on the entropy of fusion of argon, O. K. Rice—121(L)
Optical sensitizing of silver halides by dyes. III. The relation of sensitizing to the absorption spectra and constitution of dyes, S. E. Sheppard, R. H. Lambert and R. D. Walker—96
Polarization of ions and lattice distances, Kasimir Fajans—281(L)
Second-neighbor interactions and the critical behavior of binary solid solutions, T. S. Chang—174
Simultaneous determination of adiabatic and isothermal elasticities, H. F. Ludloff—119(L)
Statistical mechanics of fusion, John G. Kirkwood and Elizabeth Monroe—514
Statistical mechanics of nearest neighbor systems, Elliott W. Montroll—706
Structure of black carbon, Addison H. White and Lester H. Germer—492
Theory of the transition in KH_2PO_4, J. C. Slater—16
Thermodynamic properties of binary solid solutions on the basis of the nearest neighbor approximation, Edwin N. Lassettre and John P. Howe—747
Thermodynamic properties of binary solid solutions. Phase separation, Edwin N. Lassettre and John P. Howe—801

Deuterium (see **Isotopes**)
Dielectric Constants
Anomalous dispersion and dielectric loss in polar polymers, John G. Kirkwood and Raymond M. Fuoss—329
Association of phenols, Worth H. Rodebush and C. Kretschmer—284(L)
Dispersion and absorption in dielectrics. I. Alternating current characteristics, Kenneth S. Cole and Robert H. Cole—341
Electric polarization of carboxylic acids in dilute solutions of nonpolar solvents. I. The relation of electric polarization to the association of carboxylic acids in hydrocarbon solvents, Herbert A. Pohl, Marcus E. Hobbs and Paul M. Gross—408

Electric polarization of carboxylic acids. II. Polarization of heavy acetic acid and of the three fluorobenzoic acids in benzene and the anomalous polarization of the dimer, Arthur A. Maryott, Marcus E. Hobbs and Paul M. Gross—415
High frequency energy losses in solutions containing macromolecules, Willard P. Conner—591
Incomplete dissociation in solutions of strong electrolytes, Kasimir Fajans—283(L)
Induction and dipole moment in chloro- and nitroparaffins, R. H. Wiswall, Jr. and C. P. Smyth—356
Molar volume, refraction and interionic forces, Kasimir Fajans, 282(L)
Of aliphatic ketones, Robert H. Cole—251
Of trimethylaluminum, dimethylaluminum chloride and methylaluminum dichloride, R. H. Wiswall, Jr. and C. P. Smyth—352
Polarization of ions and lattice distances, Kasimir Fajans—281(L)
Theory of the transition in KH_2PO_4, J. C. Slater—16

Diffusion
Determination of diffusion coefficients, B. Serin and R. T. Ellickson—742
Differential diffusion constant of calcium chloride in aqueous solution, E. A. Hollingshead and A. R. Gordon—152
Production of concentrated carbon (13) by thermal diffusion, Alfred O. Nier and John Bardeen—690
Reduction of magnesium oxide by tungsten in vacuum, George E. Moore—427
Suggestion for a new method of fractionation of proteins by electrophoresis convection, John G. Kirkwood—878
Thermal diffusion in ternary liquid mixtures, particularly aqueous solutions containing ferrous chloride, L. J. Gillespie and Samuel Breck—370

Dipole Moments
Anomalous dispersion and dielectric loss in polar polymers, John G. Kirkwood and Raymond M. Fuoss—329
Association of phenols, Worth H. Rodebush and C. Kretschmer—284(L)
Dielectric constants of aliphatic ketones, Robert H. Cole—251
Dispersion and absorption in dielectrics. I. Alternating current characteristics, Kenneth S. Cole and Robert H. Cole—341
Electric polarization of carboxylic acids in dilute solutions of nonpolar solvents. I. The relation of electric polarization to the association of carboxylic acids in hydrocarbon solvents, Herbert A. Pohl, Marcus E. Hobbs and Paul M. Gross—408
Electric polarization of carboxylic acids. II. Polarization of heavy acetic acid and of the three fluorobenzoic acids in benzene and the anomalous polarization of the dimer, Arthur A. Maryott, Marcus E. Hobbs and Paul M. Gross—415
Induction and dipole moment in chloro- and nitroparaffins, R. H. Wiswall, Jr. and C. P. Smyth—356
Inductive mechanism of dipole interaction and the estimation of molecular dipole moments, A. Edward Remick—653
Measurement of the dielectric constants of vapors and the polarizations of trimethylaluminum, dimethylaluminum chloride and methylaluminum dichloride, R. H. Wiswall, Jr. and C. P. Smyth—352

Electrochemistry
Effect of electrostatic forces on electrokinetic potentials, W. G. Eversole and W. W. Boardman—798
Modified theory of the electrical double layer, Robert B. Whitney and David C. Grahame—827(L)
Overvoltage and the structure of the electrical double layer at a hydrogen electrode, George E. Kimball, Samuel Glasstone and Alvin Glassner—91
Photovoltaic effect, Edward Adler—486(L); Hans M. Cassel—377(L)
Theory of the hydrogen overvoltage, J. A. V. Butler—279

Electron Affinity
Negative ion formation in iodine vapor by electron impacts, Rolf Buchdahl—146

Electron Diffraction
Influence of intramolecular atomic motion on electron diffraction diagrams, P. Debye—55
Investigation of the molecular structure of tetrahydrofuran, 2,5-dihydrofuran, furan, dioxadiene and *p*-dioxene, J. Y. Beach—54
Structure of black carbon, Addison H. White and Lester H. Germer—492

Errata
Spectroscopic evidence for hydrogen bonds: comparison of proton-attracting properties of liquids. IV. Walter Gordy—440(L)
Temperature coefficient of the conductance of potassium chloride in H_2O-D_2O, Victor K. LaMer and Frederick C. Nachod—379(L)

Explosion (see **Ignition**)

Fluorescence
Remarks on the fluorescence, phosphorescence and photochemistry of dyestuffs, James Franck and Robert Livingston—184

Free Rotation (see **Rotation**)

Glass (see **Amorphous State**)

Heat Capacity (see **Thermodynamic Properties**)

Hindered Rotation (see **Rotation**)

Hydrogen Bonds
Association of phenols, Worth H. Rodebush and C. Kretschmer—284(L)
Spectroscopic evidence for hydrogen bonds: Comparison of proton-attracting properties of liquids. III. Walter Gordy and Spencer C. Stanford—204; IV. Walter Gordy—215; Erratum—440(L)
Theory of the transition in KH_2PO_4, J. C. Slater—16

Ignition
Reaction between hydrogen and oxygen: Kinetics of the third explosion limit, Harold R. Heiple and Bernard Lewis—584
Reaction between hydrogen and oxygen: The upper explosion limit and the reaction in its vicinity, Guenther von Elbe and Bernard Lewis—194(L)
Reaction of hydrogen and oxygen in the presence of silver. The third explosion limit, Harold R. Heiple and Bernard Lewis—120(L)
Thermal reaction between hydrogen and oxygen. II. The third explosion limit, O. Oldenberg and H. S. Sommers, Jr.—114
Thermal reaction between hydrogen and oxygen. IV. Comparison of the thermal and the photochemical reaction, O. Oldenberg and H. S. Sommers, Jr.—573
Unsensitized slow combination of hydrogen and oxygen between the second and third explosion limits in the temperature range 500–560°C, F. S. Dainton—826(L)

Infra-Red Spectra (see **Absorption Spectra**)

Isotopes
Adsorption and nitrogen isotope exchange on metallic osmium catalysts, Walter R. F. Guyer, G. G. Joris and Hugh S. Taylor—287
Exchange reaction between gaseous and combined nitrogen, Georges G. Joris—775(L)
Exchange reaction between gaseous and combined nitrogen, Yoshio Nishina, Takeo Iimori, Hideo Kubo and Hiromi Nakayama—571(L)
Exchange reaction between gaseous and combined nitrogen, T. H. Norris, S. Ruben and M. D. Kamen—726(L)
Isotopic exchange between carbon tetrabromide and bromine, J. H. Hodges and A. S. Miceli—725(L)
Production of concentrated carbon (13) by thermal diffusion, Alfred O. Nier and John Bardeen—690
Raman spectra of acetylenes. IV. Carbon isotope effect in acetylenes, Forrest F. Cleveland and M. J. Murray—390
Vapor pressure and heat of vaporization of N^{15}, Isidor Kirshenbaum—660(L)

Kinetics of Reactions
Cadmium photosensitized reactions of propane, E. W. R. Steacie, D. J. LeRoy and R. Potvin—306
Efficiency of the primary photochemical process in solution, Kenton Atwood and G. K. Rollefson—506
Exchange reaction between gaseous and combined nitrogen, Georges G. Joris—775(L)
Exchange reaction between gaseous and combined nitrogen, Yoshio Nishina, Takeo Iimori, Hideo Kubo and Hiromi Nakayama—571(L)
Exchange reaction between gaseous and combined nitrogen, T. H. Norris, S. Ruben and M. D. Kamen—726(L)
Further studies on the oxidation of nitric oxide; the rate of the reaction between carbon monoxide and nitrogen dioxide, F. B. Brown and R. H. Crist—840
Granulation, phase change, and microstructure. Kinetics of phase change. III. Melvin Avrami—177
Isotopic exchange between carbon tetrabromide and bromine, J. H. Hodges and A. S. Miceli—725(L)
Mechanism of reactions involving excited electronic states. II. Some reactions of the alkali metals with hydrogen, John L. Magee and Taikei Ri—638
Mercury photosensitized reactions of ethylene, D. J. LeRoy and E. W. R. Steacie—829
Negative ion formation in iodine vapor by electron impacts, Rolf Buchdahl—146
On the polymerization of ethylene and propylene by free alkyl radicals, Otto Beeck and F. F. Rust—480
On the recombination of iodine and bromine atoms, O. K. Rice—258
Optical sensitizing of silver halides by dyes. III. The relation of sensitizing to the absorption spectra and constitution of dyes, S. E. Sheppard, R. H. Lambert and R. D. Walker—96
Photolysis of acetone in presence of mercury, Kenneth W. Saunders and H. Austin Taylor—616
Pyrolysis of formaldoxime, H. Austin Taylor and H. Bender—761
Reaction between hydrogen and oxygen: Kinetics of the third explosion limit, Harold R. Heiple and Bernard Lewis—584
Reaction between hydrogen and oxygen: The upper explosion limit and the reaction in its vicinity, Guenther von Elbe and Bernard Lewis—194(L)
Reaction of hydrogen and oxygen in the presence of silver. The third explosion limit, Harold R. Heiple and Bernard Lewis—120(L)
Reduction of magnesium oxide by tungsten in vacuum, George E. Moore—427
Semi-empirical calculations of activation energies, Joseph O. Hirschfelder—645
Theory of the hydrogen overvoltage, J. A. V. Butler—279
Thermal decomposition of methyl-*n*-butyl ether, Sidney J. Magram and H. Austin Taylor—755
Thermal reaction between hydrogen and oxygen. II. The third explosion limit, O. Oldenberg and H. S. Sommers, Jr.—114; III. The temperature coefficient of the steady thermal reaction, O. Oldenberg and H. S. Sommers, Jr.—432; IV. Comparison of the thermal and the photochemical reaction, O. Oldenberg and H. S. Sommers, Jr.—573
Unmixing effect of sound waves on liquid mixtures, Karl F. Herzfeld—513
Unsensitized slow combination of hydrogen and oxygen between the second and third explosion limits in the temperature range 500–560°C, F. S. Dainton—826(L)

Large Molecules
Anomalous dispersion and dielectric loss in polar polymers, John G. Kirkwood and Raymond M. Fuoss—329
Crystal density of native cellulose, W. James Lyons—377(L)
Dispersion and absorption in dielectrics. I. Alternating current characteristics, Kenneth S. Cole and Robert H. Cole—341

High frequency energy losses in solutions containing macromolecules, Willard P. Conner—591
Suggestion for a new method of fractionation of proteins by electrophoresis convection, John G. Kirkwood—878
Theory of the thermodynamic properties of large molecules, Richard E. Powell, Charles R. Clark and Henry Eyring—268
Thermodynamics of high polymer solutions, Paul J. Flory—660(L)

Liquids

Anomalous dispersion and dielectric loss in polar polymers, John G. Kirkwood and Raymond M. Fuoss—329
Association of phenols, Worth H. Rodebush and C. Kretschmer—284(L)
Atomic distribution in liquid elements, Carl Gamertsfelder—450
Dielectric constants of aliphatic ketones, Robert H. Cole—251
Differential diffusion constant of calcium chloride in aqueous solution, E. A. Hollingshead and A. R. Gordon—152
Dispersion and absorption in dielectrics. I. Alternating current characteristics, Kenneth S. Cole and Robert H. Cole—341
Double refraction of flow studies with methyl methacrylate polymers in solution, A. J. de Rosset—766
Efficiency of the primary photochemical process in solution, Kenton Atwood and G. K. Rollefson—506
Electric polarization of carboxylic acids in dilute solutions of nonpolar solvents. I. The relation of electric polarization to the association of carboxylic acids in hydrocarbon solvents, Herbert A. Pohl, Marcus E. Hobbs and Paul M. Gross—408
Electric polarization of carboxylic acids. II. Polarization of heavy acetic acid and of the three fluorobenzoic acids in benzene and the anomalous polarization of the dimer, Arthur A. Maryott, Marcus E. Hobbs and Paul M. Gross—415
Evidence for a rigid multilayer at a solid-liquid interface, W. G. Eversole and Paul H. Lahr—530
Freezings and compressions to 50,000 kg/cm², P. W. Bridgman—794
General thermodynamic theory of the spreading of liquids to form duplex films and of liquids or solids to form monolayers, William D. Harkins—552
High frequency energy losses in solutions containing macromolecules, Willard P. Conner—591
Incomplete dissociation in solutions of strong electrolytes, Kasimir Fajans—283(L)
Measurement of tension in solutions, Arthur F. Scott and G. Marshall Pound—726(L)
Molecular distribution, Joseph E. Mayer and Elliott Montroll—2
Note on the entropy of fusion of argon, O. K. Rice—121(L)
On some points of the Bose-Einstein condensation, L. Goldstein—273
Partition function for normal liquids, John Walter and Henry Eyring—393
Region of critical solution of binary liquids, evidence for an anomalous first-order transition in the system triethyl amine-water, Louis D. Roberts and Joseph E. Mayer—852
Sorting of mixed solvents by ions, George Scatchard—34
Spectroscopic evidence for hydrogen bonds: Comparison of proton-attracting properties of liquids. III. Walter Gordy and Spencer C. Stanford—204; IV. Walter Gordy—215; Erratum—440(L)
Spreading of oils on water. Part I. Ionized molecules having only one polar group, W. A. Zisman—534; Part II. Non-ionized molecules having only one polar group, W. A. Zisman—729; III. Spreading pressures and the Gibbs adsorption relation, W. A. Zisman—789
Statistical mechanics of fusion, John G. Kirkwood and Elizabeth Monroe—514
Studies on glass. XVII. The thermal conductivity of glassy and liquid glucose, Earnest S. Greene and George S. Parks—262
Temperature coefficient of the conductance of potassium chloride in H_2O-D_2O mixtures, Victor K. LaMer and Frederick C. Nachod—265; Erratum—379(L)
Thermal conductivity of liquids, M. Rama Rao—120(L)
Thermal diffusion in ternary liquid mixtures, particularly aqueous solutions containing ferrous chloride, L. J. Gillespie and Samuel Breck—370
Unmixing effect of sound waves on liquid mixtures, Karl F. Herzfeld—513
Velocity of sound in liquids and chemical constitution, M. Rama Rao—682
X-ray study of liquid benzene, cyclohexane and their mixtures, Paul H. Bell and Wheeler P. Davey—441

Magnetic Properties

Magnetic susceptibility of Ti and Zr, C. F. Squire and A. R. Kaufmann—673
Magnetic and x-ray studies on Ti and Zr with dissolved hydrogen, J. Fitzwilliam, A. Kaufmann and C. Squire—678
Note on diamagnetic anisotropy and the method of molecular orbitals, Harvey Brooks—463
On the theory of antiferromagnetism, J. H. Van Vleck—85
Statistical mechanics of nearest neighbor systems, Elliott W. Montroll—706
Tables of thermodynamic functions of paramagnetic substances and harmonic oscillators, J. R. and R. A. Hull—465

Mechanics

Coriolis perturbations and molecular dimensions in germane GeH_4, Ta-You Wu—195(L)
Near infra-red spectra of linear Y_2X_2 molecules, Wave H. Shaffer and Alvin H. Nielsen—847
Normal vibrations of molecules with internal torsional motions, Bryce L. Crawford, Jr. and E. Bright Wilson, Jr.—323
On the anharmonicity of vibrations of polyatomic molecules. I, Otto Redlich—298

Mechanics (continued)
Partition functions of molecules with internal torsion. I. Single asymmetric top attached to rigid framework, Donna Price—807
Rotation-vibration energies of the pyramidal XY_3 molecular model, Wave Henry Shaffer—607
Some mathematical methods for the study of molecular vibrations, E. Bright Wilson, Jr.—76
Vibration-rotation energies of the planar XY_3 molecular model, Samuel Silver and Wave H. Shaffer—599
Mechanics, Quantum
Equation of state of solid helium, Brother Gabriel Kane—568
Long wave-length spectra of aldehydes and ketones. Part I. Saturated aldehydes and ketones, Henry L. McMurry—231; Part II. Conjugated aldehydes and ketones, Henry L. McMurry—241
Near infra-red spectra of linear Y_2X_2 molecules, Wave H. Shaffer and Alvin H. Nielsen—847
Mechanism of reactions involving excited electronic states. II. Some reactions of the alkali metals with hydrogen, John L. Magee and Taikei Ri—638
Note on diamagnetic anisotropy and the method of molecular orbitals, Harvey Brooks—463
On some properties of Bose-Einstein gases, Louis Goldstein—472
Rotation-vibration energies of the pyramidal XY_3 molecular model, Wave Henry Shaffer—607
Semi-empirical calculations of activation energies, Joseph O. Hirschfelder—645
Theory of some van der Waals molecules, Ralph Heller—154
Vibration-rotation energies of the planar XY_3 molecular model, Samuel Silver and Wave H. Shaffer—599
Mechanics, Statistical
Anomalous dispersion and dielectric loss in polar polymers, John G. Kirkwood and Raymond M. Fuoss—329
Compressibilities of gaseous mixtures of methane and normal butane. The equation of state for gas mixtures, James A. Beattie, Walter H. Stockmayer, and Henry G. Ingersoll—871
Dissociation treatment of condensing systems—IV. C. Ch'eng, T. P. Tseng, S. K. Feng and W. Band—123
Effect of the rotation of groups about bonds on optical rotary power, Walter Kauzmann and Henry Eyring—41
Entropy of acetic acid, J. O. Halford—859
Granulation, phase change, and microstructure. Kinetics of phase change. III. Melvin Avrami—177
Heat capacities of molecular lattices. I. Introduction, R. C. Lord, Jr.—693
Heat capacity of certain halomethanes, George Glockler and Walter F. Edgell—527
High rotational levels and the partition function for hydrogen, Harold W. Woolley—470
Molecular distribution, Joseph E. Mayer and Elliott Montroll—2
Note on Bethe-Kirkwood's partition function for a binary solid solution, T. S. Chang—169
Note on the entropy of fusion of argon, O. K. Rice—121(L)
On some points of the Bose-Einstein condensation, L. Goldstein—273
On some properties of Bose-Einstein gases, Louis Goldstein—472
On the recombination of iodine and bromine atoms, O. K. Rice—258
On the theory of antiferromagnetism, J. H. Van Vleck—85
Partition function for normal liquids, John Walter and Henry Eyring—393
Partition functions of molecules with internal torsion. I. Single asymmetric top attached to rigid framework, Donna Price—807
Photovoltaic effect, Edward Adler—486(L)
Restricted rotation potential and frequency assignment in propylene, D. Telfair and W. H. Pielemeier—571(L)
Second-neighbor interactions and the critical behavior of binary solid solutions, T. S. Chang—174
Second virial coefficients of polar gas mixtures, W. H. Stockmayer—863
Second virial coefficients of polar gases, W. H. Stockmayer—398
Solutions of long chain compounds, Maurice L. Huggins—440(L)
Sorting of mixed solvents by ions, George Scatchard—34
Statistical mechanics of fusion, John G. Kirkwood and Elizabeth Monroe—514
Statistical mechanics of imperfect gases, Elliott W. Montroll and Joseph E. Mayer—626
Statistical mechanics of nearest neighbor systems, Elliott W. Montroll—706
Statistical thermodynamics of several halomethanes, Walter F. Edgell and George Glockler—484(L)
Tables of thermodynamic functions of paramagnetic substances and harmonic oscillators, J. R. and R. A. Hull—465
Theory of acid strength. Temperature effect, John L. Magee, Taikei Ri and Henry Eyring—419
Theory of the transition in KH_2PO_4, J. C. Slater—16
Thermodynamic functions for molecules with internal rotation, Kenneth S. Pitzer and William D. Gwinn—485(L)
Thermodynamic properties of binary solid solutions on the basis of the nearest neighbor approximation, Edwin N. Lassettre and John P. Howe—747
Thermodynamic properties of binary solid solutions. Phase separation, Edwin N. Lassettre and John P. Howe—801
Thermodynamic properties of phosphorus, phosphine, and some phosphorus halides, D. P. Stevenson and Don M. Yost—403
Thermodynamics of high polymer solutions, Paul J. Flory—660(L)
Unmixing effect of sound waves on liquid mixtures, Karl F. Herzfeld—513
Vibrational energy levels and specific heat of ethylene, E. J. Burcik, Eugene H. Eyster and Don M. Yost—118(L)

Molecular Beams (see **Atomic Beams**)
Molecular Films (see **Surface Phenomena**)
Molecular Spectra (see **Absorption Spectra**, and **Fluorescence**)
Molecular Structure and Constants
Coriolis perturbations and molecular dimensions in germane GeH_4, Ta-You Wu—195(L)
Electron diffraction investigation of the molecular structure of tetrahydrofuran, 2,5-dihydrofuran, furan, dioxadiene and *p*-dioxene, J. Y. Beach—54
Force constants in some organic molecules, Bryce L. Crawford, Jr. and Stuart R. Brinkley, Jr.—69
Fundamental frequencies of certain halomethanes. II. The Raman spectrum of fluoroform, G. Glockler and W. F. Edgell—224
Helium repulsive potential from collision cross section measurements, I. Amdur and H. Pearlman—503
High rotational levels and the partition function for hydrogen, Harold W. Woolley—470
Incomplete dissociation in solutions of strong electrolytes, Kasimir Fajans—283(L)
Induction and dipole moment in chloro- and nitroparaffins, R. H. Wiswall, Jr. and C. P. Smyth—356
Influence of intramolecular atomic motion on electron diffraction diagrams, P. Debye—55
Infra-red and Raman spectra of polyatomic molecules. XIII. Nitromethane, A. J. Wells and E. Bright Wilson, Jr.—314; XIV. Propylene, E. Bright Wilson, Jr. and A. J. Wells—319
Long wave-length spectra of aldehydes and ketones. Part I. Saturated aldehydes and ketones, Henry L. McMurry—231; Part II. Conjugated aldehydes and ketones, Henry L. McMurry—241
Measurement of the dielectric constants of vapors and the polarizations of trimethylaluminum, dimethylaluminum chloride and methylaluminum dichloride, R. H. Wiswall, Jr. and C. P. Smyth—352
Molar volume, refraction and interionic forces, Kasimir Fajans—282(L)
Molecular configurations in rotational isomerism, Sanichiro Mizushima, Yonezo Morino, and Masatami Takeda—826(L)
Near infra-red spectra of linear Y_2X_2 molecules, Wave H. Shaffer and Alvin H. Nielsen—847
Negative ion formation in iodine vapor by electron impacts, Rolf Buchdahl—146
One-sided polarization of ions in vapor molecules, Kasimir Fajans—378(L)
On the anharmonicity of vibrations of polyatomic molecules. I, Otto Redlich—298
On the recombination of iodine and bromine atoms, O. K. Rice—258
Polarization of ions and lattice distances, Kasimir Fajans—281(L)
Potential energy functions for diatomic molecules, Hugh M. Hulburt and Joseph O. Hirschfelder—61
Rotational isomerism in the alkyl halides, Walter F. Edgell and George Glockler—375
Second virial coefficients of polar gases, W. H. Stockmayer—398
Some mathematical methods for the study of molecular vibrations, E. Bright Wilson, Jr.—76
Theory of acid strength. Temperature effect, John L. Magee, Taikei Ri and Henry Eyring—419
Theory of some van der Waals molecules, Ralph Heller—154
Vibrations of long chain molecules; Raman spectra of *n*-octane, decane, cetane and eicosane, E. J. Rosenbaum—295

Optical Activity
Effect of the rotation of groups about bonds on optical rotary power, Walter Kauzmann and Henry Eyring—41
Optical Properties
Double refraction of flow studies with methyl methacrylate polymers in solution, A. J. de Rosset—766
Overvoltage
And the structure of the electrical double layer at a hydrogen electrode, George E. Kimball, Samuel Glasstone and Alvin Glassner—91
Theory of the hydrogen overvoltage, J. A. V. Butler—279

Phase Transitions
Dissociation treatment of condensing systems—IV. C. Ch'eng, T. P. Tseng, S. K. Feng and W. Band—123
Entropy of formic acid. The heat capacity from 15 to 300°K. Heats of fusion and vaporization, J. W. Stout and Leon H. Fisher—163
Freezings and compressions to 50,000 kg/cm², P. W. Bridgman—794
Granulation, phase change, and microstructure. Kinetics of phase change. III. Melvin Avrami—177
Influence of the temperature of crystallization on the melting of crystalline rubber, Norman Bekkedahl and Lawrence A. Wood—193(L)
Note on the entropy of fusion of argon, O. K. Rice—121(L)
On some points of the Bose-Einstein condensation, L. Goldstein—273
Region of critical solution of binary liquids. Evidence for an anomalous first-order transition in the system triethyl amine-water, Louis D. Roberts and Joseph E. Mayer—852
Statistical mechanics of nearest neighbor systems, Elliott W. Montroll—706
Statistical mechanics of fusion, John G. Kirkwood and Elizabeth Monroe—514
Theory of the transition in KH_2PO_4, J. C. Slater—16
Thermal anomaly in anhydrous copper sulfate, J. W. Stout—285(L)
Thermal transitions in ammonium and silver trihydrogen paraperiodates, C. C. Stephenson—379(L)
Thermodynamic properties of binary solid solutions. Phase separation, Edwin N. Lassettre and John P. Howe—801

Photochemistry
Cadmium photosensitized reactions of propane, E. W. R. Steacie, D. J. LeRoy and R. Potvin—306
Efficiency of the primary photochemical process in solution, Kenton Atwood and G. K. Rollefson—506
Mechanism of reactions involving excited electronic states. II. Some reactions of the alkali metals with hydrogen, John L. Magee and Taikei Ri—638
Mercury photosensitized reactions of ethylene, D. J. LeRoy and E. W. R. Steacie—829
Note on the chain photolysis of acetaldehyde in intermittent light, R. G. W. Norrish—377(L)
Photolysis of acetone in presence of mercury, Kenneth W. Saunders and H. Austin Taylor—616
Photovoltaic effect, Edward Adler—486(L); Hans M. Cassel—377(L)
Remarks on the fluorescence, phosphorescence and photochemistry of dyestuffs, James Franck and Robert Livingston—184
Thermal reaction between hydrogen and oxygen. IV. Comparison of the thermal and the photochemical reaction, O. Oldenberg and H. S. Sommers, Jr.—573

Quantum Mechanics (see **Mechanics, Quantum**)

Raman Spectra
Hindered rotation in halogenated ethanes, George Glockler and Charles Sage—387
Of acetylenes. Carbon isotope effect in acetylenes, Forrest F. Cleveland and M. J. Murray—390
Of diborane, Fred Stitt—780
Of di-tertiary-butyl ether, Forrest F. Cleveland—722
Of fluoroform, G. Glockler and W. F. Edgell—224
Of mono- and dichlorobenzenes, H. Sponer and J. S. Kirby-Smith—667
Of nitromethane, A. J. Wells and E. Bright Wilson, Jr.—314
Of *n*-octane, decane, cetane and eicosane, E. J. Rosenbaum—295
Of propylene, E. Bright Wilson, Jr. and A. J. Wells—319
Of some ethers containing one or more phenyl groups, M. J. Murray and Forrest F. Cleveland—129
Rotational isomerism in the alkyl halides, Walter F. Edgell and George Glockler—375
Vibrational energy levels and specific heat of ethylene, E. J. Burcik, Eugene H. Eyster and Don M. Yost—118(L)

Rotation
Effect of the rotation of groups about bonds on optical rotary power, Walter Kauzmann and Henry Eyring—41
High rotational levels and the partition function for hydrogen, Harold W. Woolley—470
Hindered rotation in halogenated ethanes, George Glockler and Charles Sage—387
Infra-red bands of hydrogen peroxide at λ9720 and the structure and torsional oscillation of hydrogen peroxide, Lloyd R. Zumwalt and Paul A. Giguère—458
Molecular configurations in rotational isomerism, Sanichiro Mizushima, Yonezo Morino, and Masatami Takeda—826(L)
Partition functions of molecules with internal torsion. I. Single asymmetric top attached to rigid framework, Donna Price—807
Restricted rotation potential and frequency assignment in propylene, D. Telfair and W. H. Pielemeier—571(L)
Rotation-vibration energies of the pyramidal XY_3 molecular model, Wave Henry Shaffer—607
Theory of the transition in KH_2PO_4, J. C. Slater—16
Thermodynamic functions for molecules with internal rotation, Kenneth S. Pitzer and William D. Gwinn—485(L)
Vibration-rotation energies of the planar XY_3 molecular model, Samuel Silver and Wave H. Shaffer—599

Solutions (see **Liquids**)

Sound
Unmixing effect of sound waves on liquid mixtures, Karl F. Herzfeld—513
Velocity of sound in liquids and chemical constitution, M. Rama Rao—682

Spectra (see **Absorption Spectra**)

Statistical Mechanics (see **Mechanics, Statistical**)

Surface Phenomena
Adsorption and nitrogen isotope exchange on metallic osmium catalysts, Walter R. F. Guyer, G. G. Joris and Hugh S. Taylor—287
Dissociation treatment of condensing systems—IV. C. Ch'eng, T. P. Tseng, S. K. Feng and W. Band—123
Entropy of surface formation, Worth H. Rodebush—284(L)
Evidence for a rigid multilayer at a solid-liquid interface, W. G. Eversole and Paul H. Lahr—530
General thermodynamic theory of the spreading of liquids to form duplex films and of liquids or solids to form monolayers, William D. Harkins—552
Immobile layer at the solid-liquid interface, J. J. Bikerman—880(L)
Reduction of magnesium oxide by tungsten in vacuum, George E. Moore—427
Spreading of oils on water. Part I. Ionized molecules having only one polar group, W. A. Zisman—534; Part II. Non-ionized molecules having only one polar group, W. A. Zisman—729; III. Spreading pressures and the Gibbs adsorption relation, W. A. Zisman—789
Thickness of the rigid water film at a quartz-water interface from a measurement of Newton's rings, W. G. Eversole and Paul H. Lahr—686

Thermodynamic Properties
Compressibilities of gaseous mixtures of methane and normal butane. The equation of state for gas mixtures, James A. Beattie, Walter H. Stockmayer, and Henry G. Ingersoll—871
Entropy of acetic acid, J. O. Halford—859
Entropy of formic acid. The heat capacity from 15° to 300°K. Heats of fusion and vaporization, J. W. Stout and Leon H. Fisher—163

Entropy of surface formation, Worth H. Rodebush—284(L)
Equation of state of solid helium, Brother Gabriel Kane—568
Heat capacity of certain halomethanes, George Glockler and Walter F. Edgell—527
Heat capacities of molecular lattices. I. Introduction, R. C. Lord, Jr.—693; II. The structure of metallic lithium, R. C. Lord, Jr.—700
High rotational levels and the partition function for hydrogen, Harold W. Woolley—470
Influence of the temperature of crystallization on the melting of crystalline rubber, Norman Bekkedahl and Lawrence A. Wood—193(L)
Low velocity hydrogen ion scattering in hydrogen, water and ammonia, A. S. Russell, C. M. Fontana and J. H. Simons—381
Restricted rotation potential and frequency assignment in propylene, D. Telfair and W. H. Pielemeier—571(L)
Region of critical solution of binary liquids. Evidence for an anomalous first-order transition in the system triethyl amine-water, Louis D. Roberts and Joseph E. Mayer—852
Second virial coefficients of polar gases, W. H. Stockmayer—398
Second virial coefficients of polar gas mixtures, W. H. Stockmayer—863
Solutions of long chain compounds, Maurice L. Huggins—440(L)
Sorting of mixed solvents by ions, George Scatchard—34
Statistical thermodynamics of several halomethanes, Walter F. Edgell and George Glockler—484(L)
Tables of thermodynamic functions of paramagnetic substances and harmonic oscillators, J. R. and R. A. Hull—465
Theory of acid strength. Temperature effect, John L. Magee, Taikei Ri and Henry Eyring—419
Theory of the thermodynamic properties of large molecules, Richard E. Powell, Charles R. Clark and Henry Eyring—268
Theory of the transition in KH_2PO_4, J. C. Slater—16
Thermal anomaly in anhydrous copper sulfate, J. W. Stout—285(L)
Thermal transitions in ammonium and silver trihydrogen paraperiodates, C. C. Stephenson—379(L)
Thermodynamic functions for molecules with internal rotation, Kenneth S. Pitzer and William D. Gwinn—485(L)
Thermodynamic properties of binary solid solutions on the basis of the nearest neighbor approximation, Edwin N. Lassettre and John P. Howe—747
Thermodynamics of high polymer solutions, Paul J. Flory—660(L)
Thermodynamic properties of phosphorus, phosphine, and some phosphorus halides, D. P. Stevenson and Don M. Yost—403
Vapor density of iodine at high temperatures, M. L. Perlman and G. K. Rollefson—362
Vapor pressure and heat of vaporization of N^{15}, Isidor Kirshenbaum—660(L)
Vibrational energy levels and specific heat of ethylene, E. J. Burcik, Eugene H. Eyster and Don M. Yost—118(L)
Volume change on mixing gases, Aaron E. Markham and Kenneth A. Kobe—438

Thermodynamics
General thermodynamic theory of the spreading of liquids to form duplex films and of liquids or solids to form monolayers, William D. Harkins—552
Notation for the derivatives of the two types of line integral in thermodynamics, G. Tunell—191

Ultrasonics (see **Sound**)

Valence (see **Mechanics, Quantum**)

Vapor Pressure
Entropy of acetic acid, J. O. Halford—859
Vapor pressure and heat of vaporization of N^{15}, Isidor Kirshenbaum—660(L)

X-Ray Diffraction
Atomic distribution in liquid elements, Carl Gamertsfelder—450
Crystalline structure of Pt_3O_4, Ernesto E. Galloni and Angel E. Roffo, Jr.—875
Estimation of intensities from x-ray films, Joseph S. Lukesh—659(L)
X-ray diffraction pattern of tricalcium aluminate, Lynn J. Brady and Wheeler P. Davey—663
X-ray study of liquid benzene, cyclohexane and their mixtures, Paul H. Bell and Wheeler P. Davey—441
